10-pin Socket/Socket IDC cable - Short 1.5"

PRODUCT ID: 556

Description

Connect this to that with an IDC cable! This cable has 10 pins (2x5) in 0.1"x0.1" spacing. This is a shorter version of the cable we've carried for AVR programming, we use this for chaining together 16x24 LED matrix panels. About 1.5" long with two sockets crimped onto either side, they're quite sturdy!
